

## **BBRM EQM Learning Outcomes**

Graduates of the BBRM Equine Management degree program will have acquired and demonstrated the following competencies:

1. The ability to apply knowledge of the life sciences (including biology, chemistry and physiology) in a holistic approach to management of the equine.
2. The ability to apply relevant and appropriate business and technical skills (including accounting, budgeting and forecasting, project management, data collection and management).
3. The ability to accurately and effectively communicate ideas, arguments and analyses to stakeholders in the diverse equine industry in visual, oral and written forms.
4. The ability to engage fully and respectfully as a leader and/or team member to solve relevant equine industry issues.
5. The ability to formulate relevant and testable research questions, develop and implement an effective method of inquiry and perform appropriate quantitative and qualitative analyses.
6. The ability to effectively acquire, critique, share and apply expertise and skills relevant to the equine industry.
7. The ability to critically reflect on their personal, academic and professional goals (values) to promote ongoing positive change within themselves as well as local & global communities.
8. The ability to use connections among business, social, technological and scientific concepts and practices to gain new insights, to identify and characterize problems and to propose and critically evaluate potential solutions based on the integration of knowledge (theory) and practice across disciplinary boundaries.
9. The ability to present themselves as credible candidates for career opportunities by demonstrating an understanding of the breadth of the equine industry in Canada, workplace and professional expectations, and successful completion of tasks requiring effective organization, time management and knowledge of equine industry standards.
